

Video Calling... Why not try it!

See your friends/family while talking - it feels more like an in-person visit. See their new house, dress, baby, dog—whatever!

Wary of them seeing you while you are in your PJ's or your hair is not done? You can schedule a call so it will be convenient and you can be ready.

When you turn off cellular data use for video calling (a setting on your device) the call will only use WiFi making the video call free!

Video calling works whether your friend or loved one is in the same city, across the country or traveling abroad. Imagine sitting in your home in New Jersey and talking with/seeing your friend, in a café in France. And it costing you both nothing—magical!
