

# ANDROID TIP SHEET

(Instructions may vary by device model)

What is WiFi?	Steps to connecting to the Internet using WiFi		
<p>A wireless or WiFi network uses a radio signal instead of wires to connect devices (e.g. phone, tablet, and computers) to each other and the Internet.</p> 	<p><b>STEP 1</b></p> <p>From your device's home screen, tap on the "settings picture." Image may differ but it usually looks like gears.</p> 	<p><b>STEP 2</b></p> <p>When the settings menu pops up, tap on "WiFi"</p> 	<p><b>STEP 3</b></p> <p>Tap on the network name for your location. If you see a lock next to the name, you will need a password to connect.</p> 
<p><b>Device On/Off?</b></p>	<p><b>Screen Went Black</b></p>	<p><b>Too Big to See?</b></p>	<p><b>Not what I expected</b></p>
<p><b>On</b> Press and hold the wake/sleep button (on the edge of device until logo appears) May see flashing logo while device starts. <b>OFF</b> Hold down the sleep/wake button until slider appears or words "power off" appear on screen. Follow directions.</p>	<p>This is your device "going to sleep" trying to save battery life.</p> <p>"Wake" by holding the device vertically and press button at the top of the device</p>	<p>Make what you see on the screen smaller by placing a finger of each hand (or thumb and fore-finger) on the screen and sliding them towards each other.</p> 	<p>If what you see on the screen is unexpected or unwanted press the home button. If you do not have a home button, swipe up from the bottom of the screen. This will bring up all the apps you have open. Swipe up on each to close and start over.</p>
